

CAAMS

CAAMS AUTOMATES THE AUTHORIZATION PROCESS FOR ARMED CIVILIANS AND CONTRACTORS OCONUS

CAAMS automates the submission, approving, and compliance management of armed civilians and contractors

The CAAMS (Civilian Armed Authorization Management System) application automates the key processes for submitting, reviewing, approving, and executing requests for armed civilians and contractors in support of the U.S. Forces. The CAAMS application records all arming authorization requests for DOD contractors, civilians, and civilian law enforcement.

CAAMS monitors armed private security contractors, civilians and law enforcement professionals

The CAAMS application supports the U.S. Forces' operations by monitoring armed private security contractors, civilians, and law enforcement professionals. CAAMS tracks incidents and traces the status of all investigations involving weapon discharges.

Key Benefits of using CAAMS

- Ensures proper oversight of armed civilians and contractors
- Ensures armed civilians and contractors are adhering to DoD policy
- Tracks oversight compliance
- Provides metrics on the arming census, compliance by contract, and arming roster
- Enables external, non-DoD agencies to use and update arming compliance data
- Provides compliance management

CAAMS is part of the Joint Contingency & Expeditionary Services (JCXS) program, the DoD's agile, responsive, and global provider of joint expeditionary acquisition business solutions that fulfill mission-critical requirements, while supporting interagency collaboration – to include, but not limited to: contracting, financial, spend analysis, contract close-out, staffing, strategic sourcing and reporting.

JCXS is the information technology system used by contingency programs that rapidly deploy for humanitarian, peacetime, and wartime missions. JCXS provides centralized vendor registration and solicitation/ proposal postings on a secure web site.
